Aligner Immersion Program

30-Day Clinical Training in Real Clinics

Complete Course Fee Recoverable
as Aligners for Your Own Patients

WHY THIS PROGRAM

You did the Certification. But are you ready to treat your first case?

Most aligner courses teach you theory — slides, demos, textbook cases. But when a real patient sits in your chair, theory is not enough.

You need to have seen how a real case works from start to finish — how to talk to the patient, how to plan the treatment, what to do when things don't go as expected.

**This program puts you inside real clinics
with real patients so you learn by seeing, not just reading.**

1 Month

Watching live
patient cases

Skills you will
practice

100%

Fee Recoverable

Four phases. One clinical outcome.

Each phase builds progressively — from foundational science to live chairside competence.

Clinical Foundations & Case Economics

Multiple 1-hour sessions delivered across the 30-day programme window.
Available as live and recorded sessions.

- ✓ Overview of key smile solution categories: aligners, braces, cosmetic veneers, and professional whitening
- ✓ Clinical and practice-level benefits of aligner therapy for both the dentist and the patient
- ✓ Evaluating the clinical effectiveness of plastic-based tooth movement systems
- ✓ ROI analysis: consultation time and chair time economics per aligner case
- ✓ Communicating value propositions — biomechanical advantages, predictability, treatment duration, and lifestyle benefits

★ Quick Takeaway

**After this phase,
you will be able to:**

- Explain to any patient why aligners are a good choice
- Know which smile solution fits which situation
- Calculate if an aligner case is profitable for your clinic
- Pitch aligners confidently during consultations

Aligner Science, Biomechanics & Digital Treatment Planning

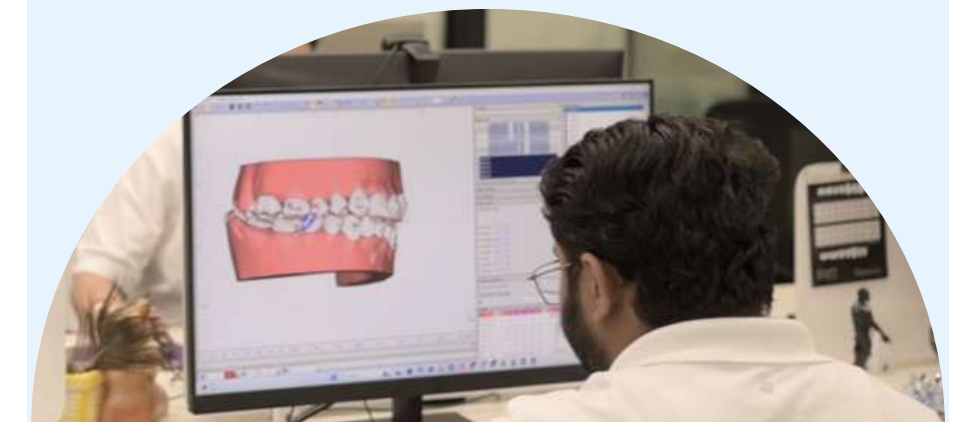

Full-day intensive, hands-on engagement with aligner systems, materials, and digital planning tools.

- ✓ How digital tools and smile solutions drive clinical and business growth
- ✓ Shifting patient expectations among Gen Z and Millennial demographics
- ✓ Addressing clinical myths and common misunderstandings around aligner therapy
- ✓ Aligner materials science, design principles, and applied biomechanics
- ✓ System components: attachments, staging protocols, IPR sequencing, and retention
- ✓ Evaluating scope of aligner therapy across malocclusion classifications
- ✓ Reading, interpreting, and prescribing digital treatment plans
- ✓ Aligner software navigation and clinical advisory fundamentals
- ✓ Management of trouble shooting during aligner treatment

★ Quick Takeaway

**After this phase,
you will be able to:**

- Read and understand a digital treatment plan
- Know which cases aligners can and cannot fix
- Understand attachments, IPR, staging, and retainers
- Use aligner software to review treatments

Intraoral Scanning Bootcamp

Dedicated hands-on day during the shadowing period. Supervised practice with real-time feedback.

Multi-Scanner Proficiency

Operating multiple brands of intraoral scanners effectively during patient consultations (**iTero, Lumina, Medit**)

Speed & Accuracy

Practical techniques for faster, more accurate scans across different scanner systems

Supervised Practice

Hands-on scanning with real-time mentor feedback and error correction

Visualisation Tools

Using scanner software for basic tooth-movement visualisation during consultations

Consultation Integration

Leveraging scan images as conversation and case-acceptance tools with patients

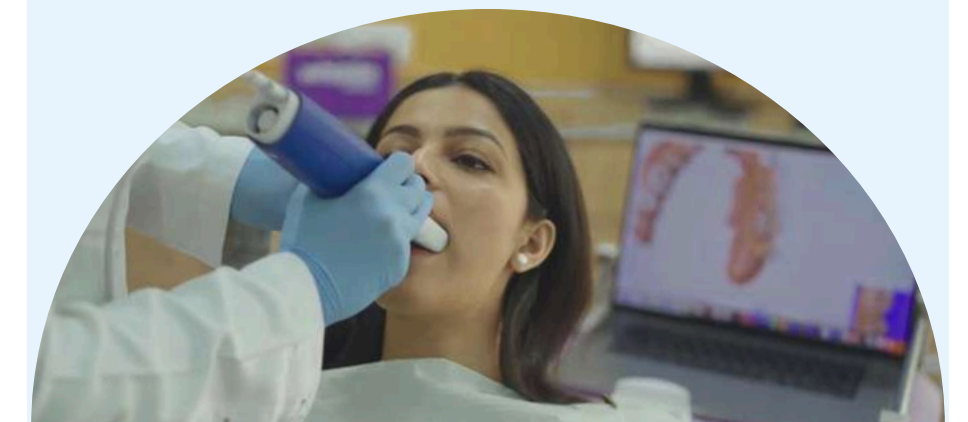

Troubleshooting

Identifying and resolving common scanning issues encountered in daily practice

★ Quick Takeaway

After this phase,
you will be able to:

- Scan any patient confidently on any scanner brand
- Use scans to help patients say yes to treatment
- Fix scanning problems on the spot

PHASE 04(Part 1) · SHADOWING & MENTORSHIP

Clinical · 28 Days (15 Mandatory)

clove:
DENTAL

Consultation, Case Presentation & Closure

- ✓ Identifying the right patients and clinical scenarios for aligner therapy
- ✓ Building effective consultation alignment between orthodontist and clinic owner
- ✓ Using digital workflows and visual tools to strengthen consultations and improve treatment acceptance
- ✓ Roleplay sessions on confidently pitching aligner treatment to patients
- ✓ Practising trust-building conversations and structured case-closure techniques
- ✓ Handling common patient objections through guided roleplay scenarios
- ✓ Setting realistic timelines and outcome expectations with patients

★ Quick Takeaway

After this phase, you will be able to:

- Pick the right patients for aligners
- Pitch treatment with confidence
- Handle doubts and close cases
- Set clear expectations so patients stay happy

Live Clinical Observation & Chairside Execution

- ✓ Observing live case identification, intraoral scanning, and patient conversations in real time
- ✓ Watching treatment plan discussions, option comparisons, and budget counselling with patients
- ✓ Observing aligner fitment sessions and patient usage instruction
- ✓ Shadowing orthodontists during IPR procedures and attachment placement
- ✓ Defining the orthodontist's role in setting the correct clinical narrative for treatment
- ✓ Practical tips and techniques for aligner delivery and chairside execution protocols

★ Quick Takeaway

**After this phase,
you will be able to:**

- Know what happens at every chairside step
- See IPR and bonding done on real patients
- Learn delivery techniques you can copy
- Understand how top orthodontists run cases

Case Monitoring, Design Studio & Manufacturing Exposure

- ✓ Understanding the basics of monitoring aligner tracking and treatment progress
- ✓ Managing multiple ongoing mid-treatment aligner cases simultaneously
- ✓ Observing live digital planning, staging, and clinical advisory discussions with designing orthodontists
- ✓ Guided walkthrough of the aligner design studio and direct interaction with the planning team
- ✓ Tour of the aligner manufacturing facility to understand production workflows and quality systems

★ Quick Takeaway

After this phase, you will be able to:

- Track aligner progress at follow-up visits
- Manage multiple cases running at the same time
- Understand how aligners are designed and made

Designed for Working Dentists

30-Day Window

Flexible timings.
Schedule around your practice.

City-Based

Delhi NCR,
Chandigarh, Mumbai,
Pune, Hyderabad,
Chennai, Bangalore.

Blended Learning

Online sessions (live + recorded), offline intensives, scanning bootcamp, chairside shadowing.

Recognition

Certificate of participation and recognition at completion.

- Online sessions available as live and recorded for flexibility
- Scanning bootcamp conducted during offline session and shadowing days
- 15 days mandatory presence; 28 days of access to shadowing & mentorship
